Problem

Many young adults struggle to balance major life changes with budgeting and finance. Lack of time leads to missed payments, increased interest rates, and snowballing debt, while tools to help manage these problems are split across several apps.

Problem Characteristics

Forgetting Monthly Payments

- Missed payments lead to higher interest rates and longer debt payoff.
- Can lower credit scores, affecting future loans (e.g., car, home).

Inexperience with Finance and Budgeting

- People inexperienced with finance and budgeting often don't know how to properly budget their money.

Helpful Features Spread Across Many Apps

- Budgeting, debt management, and learning tools are scattered across different apps.
- Each app requires a separate account, adding to the hassle.
- Users constantly switch between apps to manage everything.

Solution

CreditTrax is an all-in-one financial platform that combines AI-powered budgeting, personalized financial dashboards, and financial literacy tools to help users manage their spending, achieve long-term financial goals, and make informed financial decisions.

Solution Characteristics

Debt Tracking

- Users input and modify all their debts along with their respective interest rates and due dates to get timely reminders when to pay them.

Budget Recommendations

- Powered by generative chatbot AI to provide personalized recommendations based on a user's debt obligations, income, and spending habits.

Personalized Financial Dashboard

- A quick look into the user's financial progress and statistics.

"What-if" Analysis

- This feature enables users to explore potential financial outcomes by simulating different scenarios and giving projected results.

Visualization and Gamification

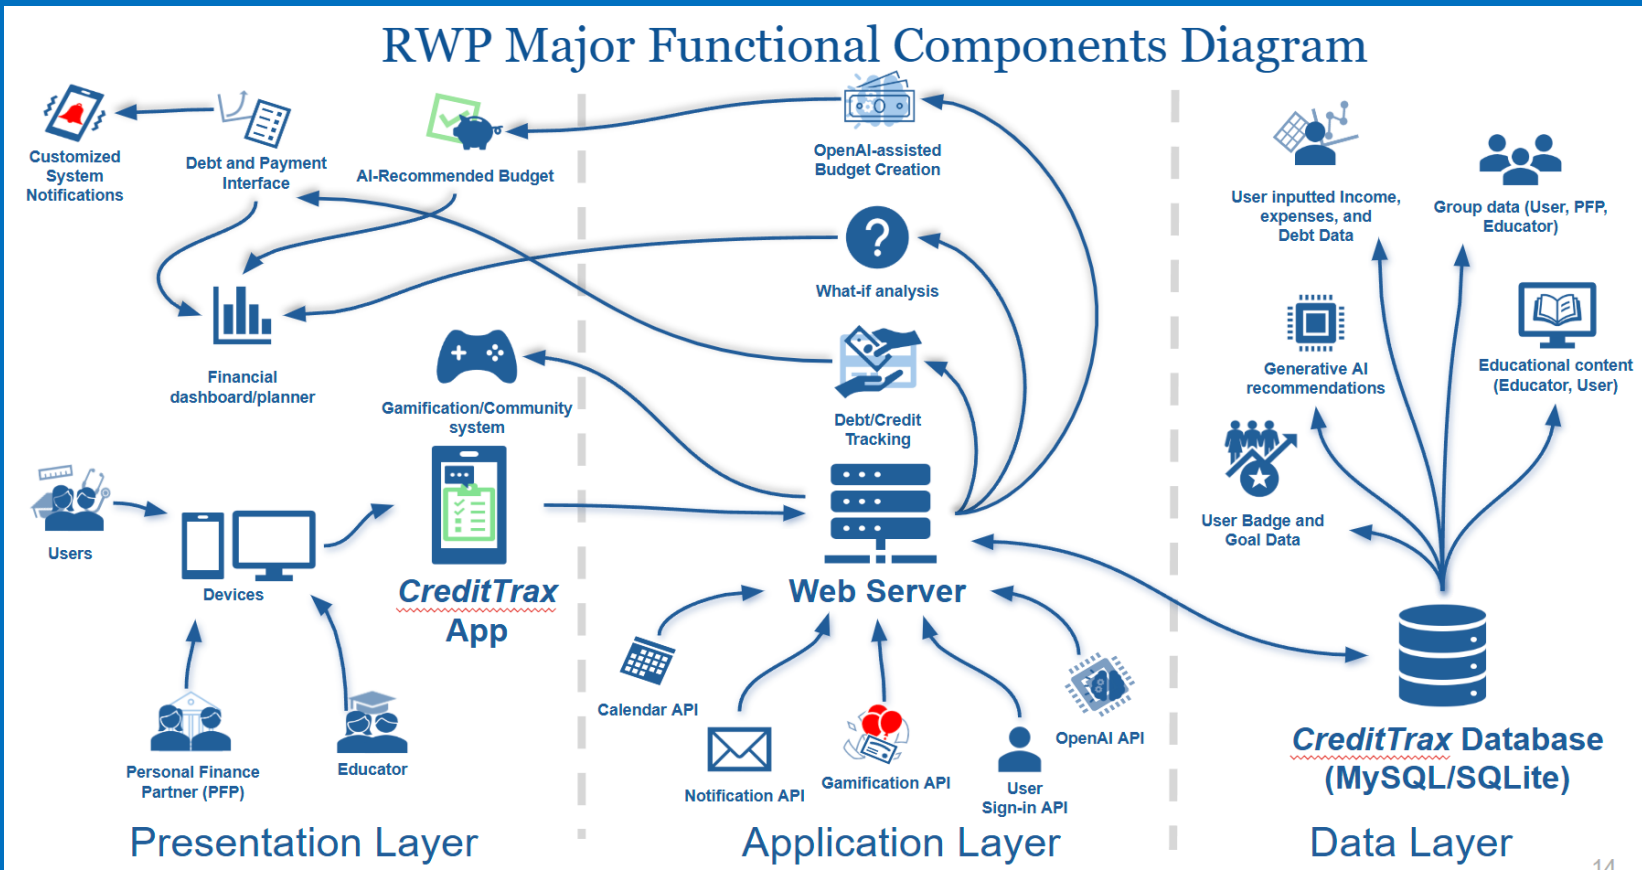

- Uses charts/graphs and badges to illustrate the user's progress with their debt.

Innovative Features vs. Competition

Upload Resources and Embed Finance Concepts in Features	Fully Implemented	Partially Implemented

UI/UX Screens

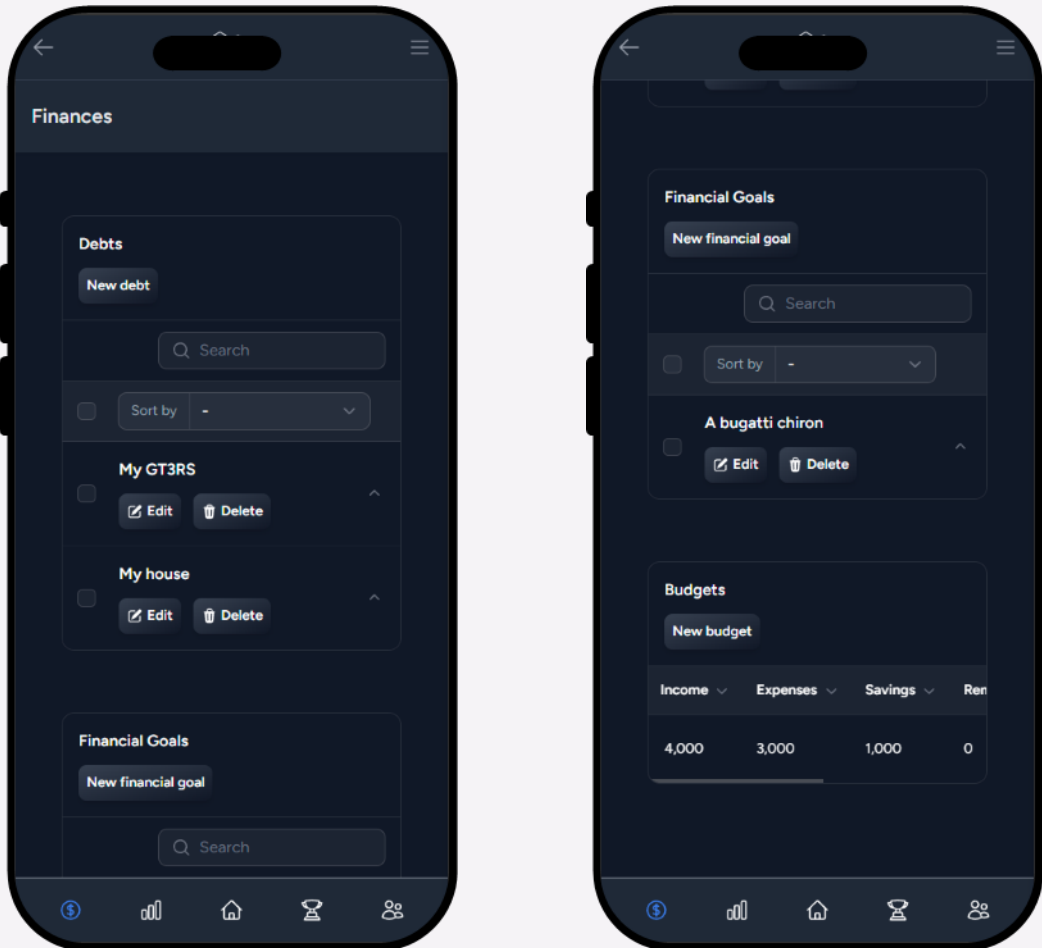

Dashboard

Shows donut chart of budget, achievement information, goals, and debt stats.

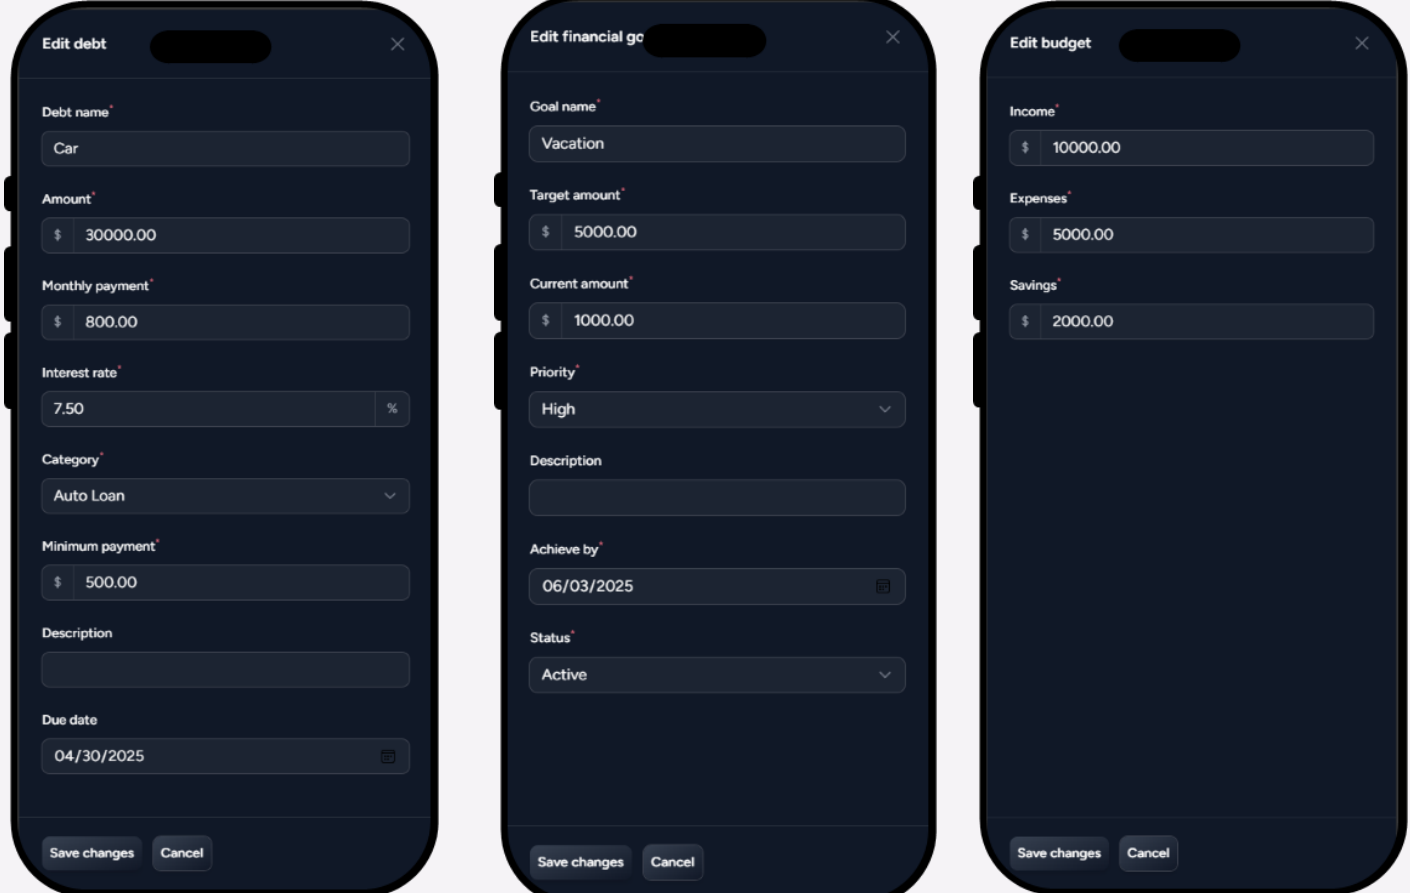

Finances Page

Shows the user's debts, financial goals, and budget. User can create a debt source/transactions, goals, and an expense for their budget.

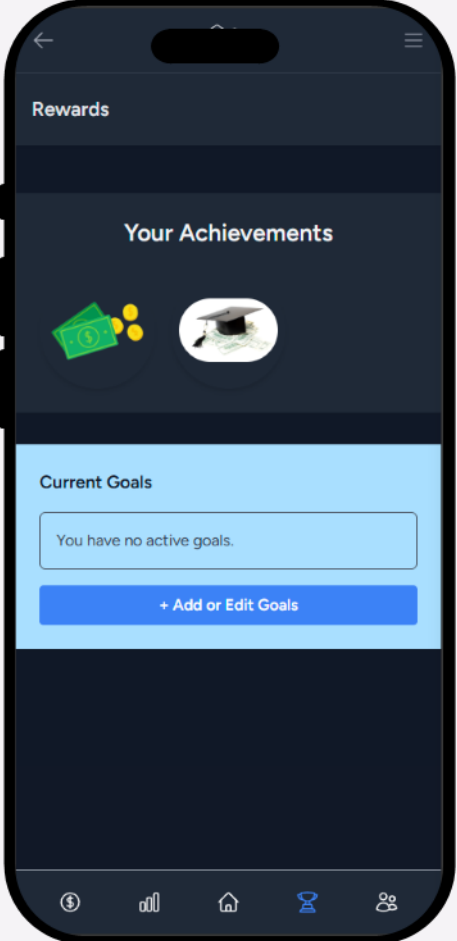

CRUD Debt Source and Goals

User can create a debt source and their financial goals. These entries are tracked in a database and used in other features such as the what-if analysis.

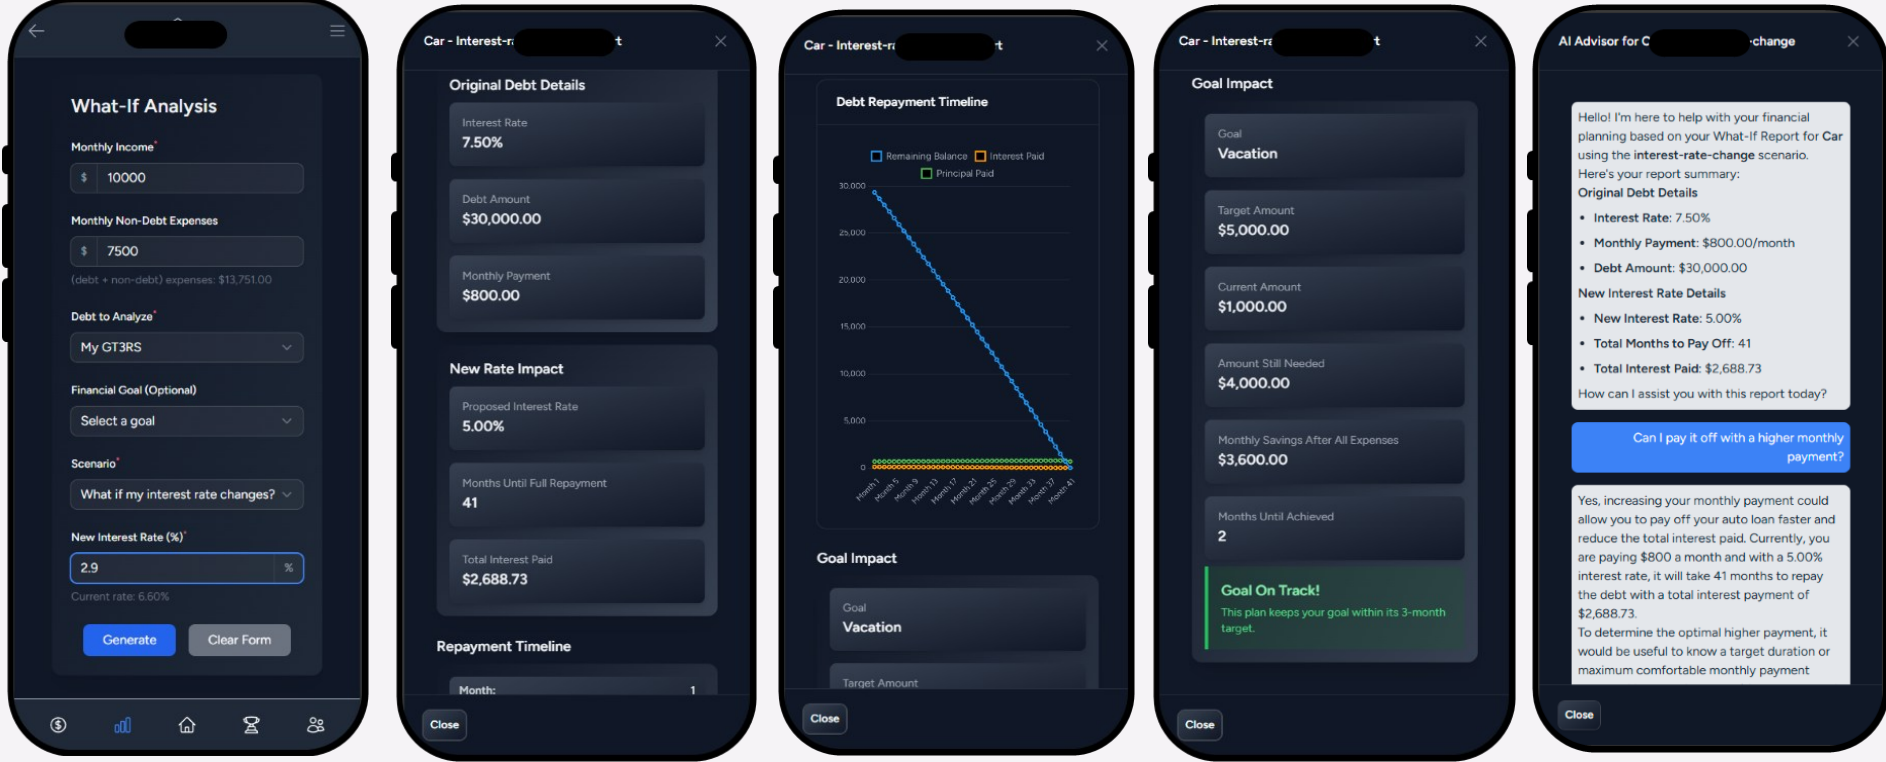

Rewards Page

Shows the achievements the user can earn in the app.

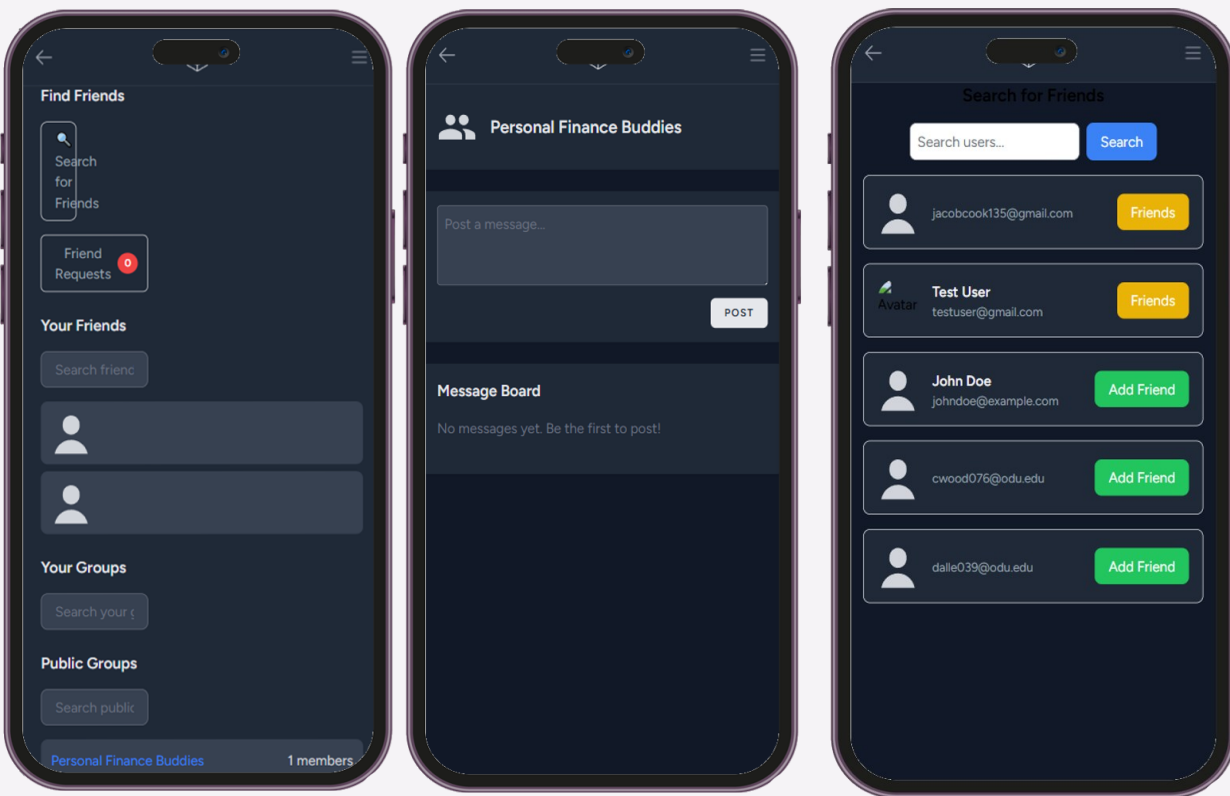

What-if Analysis

User can input financial data to run a debt or savings what-if scenario, where a report will be generated. The user can view the report, detailing the projected results in a graph and in text. AI can be used to analyze the report and generate a recommendation in the chat box, where the user can converse with it regarding their finances.

Community Page

Shows the user's friends and the groups they are a part of.
